

## “Okuma Technology taking Safarik Tool to the next level of three axis manufacturing”

**Valley Center, KS** – Safarki Tool Inc. has recently completed their 45<sup>th</sup> year of business and installed a new Okuma MB 56 vertical machining center. The company, founded in 1962 by Jerry Safarik is a precision job shop that offers 3 & 4 axis CNC machining of aluminum & hard metal focused in the Aerospace Industry.

“I wanted to let you know how pleased we are with our recent purchase of the Okuma MB-66 machining center. The machine has performed flawlessly and it is all we hoped it would be. The quality of the machine is impeccable. We are also delighted with the THINC controls. The capabilities that the new technology offers will allow us to take another huge step forward in our growth. We have already began exploring some of the options such as interfacing the machine with our MRP system and are very excited at the opportunities it will afford us. It seems as though the options are endless.”

“Even more pleasing was the personal service provided by both Evan and Dale. We enjoyed working with the entire Hartwig team. The training we received was both timely and thorough. We were producing parts the very first day the machine was in operation.”

“We look forward to working with Hartwig in the future, with the knowledge that we will be given the utmost professional service and support.”

“I would like to extend my best wishes and sincere gratitude to the Hartwig team, as well as Evan personally. I hope you have a great year, and I look forward to working with Hartwig again.”

Respectfully,

Ken Best  
Vice President/General Manager
